POLITEKNIK PURBAYA

TAHUN 2025/2026

1. Cari siswa dengan umur (ttl) paling muda

```
MariaDB [smp_n_1_talang]> SELECT nm_siswa, alamat, ttl
    -> FROM siswa
    -> WHERE ttl = (SELECT MIN(ttl) FROM siswa);
+----------+-----------------+----------------+
| nm_siswa | alamat          | ttl            |
+----------+-----------------+----------------+
| dimas    | jl.merdeka no 2 | slawi, 21 juli |
+----------+-----------------+----------------+
1 row in set (0.026 sec)

MariaDB [smp_n_1_talang]>
```

2. Subquery Menghasilkan Banyak Kolom (di SELECT)

```
MariaDB [smp_n_1_talang]> SELECT s.nm_siswa, s.alamat, s.ttl
    -> FROM siswa AS s
    -> WHERE (s.alamat, s.ttl) = (
    -> SELECT alamat, ttl
    -> FROM siswa
    -> WHERE nm_siswa = 'firza'
    -> );
+----------+-----------------+----------------+
| nm_siswa | alamat          | ttl            |
+----------+-----------------+----------------+
| firza    | jl.merdeka no 1 | slawi, 22 juli |
+----------+-----------------+----------------+
1 row in set (0.101 sec)
```

3. Membandingkan dua kolom sekaligus (tuple comparison)

```
MariaDB [smp_n_1_talang]> SELECT * FROM siswa
    -> WHERE (alamat, ttl) = (
    -> SELECT alamat, ttl
    -> FROM siswa
    -> WHERE nm_siswa = 'firza'
    -> );
+-----+----------+-----------------+----------------+-----------+-------+-------+
| nis | nm_siswa | alamat          | ttl            | jk        | agama | Kelas |
+-----+----------+-----------------+----------------+-----------+-------+-------+
| 250 | firza    | jl.merdeka no 1 | slawi, 22 juli | laki-laki | islam | NULL  |
+-----+----------+-----------------+----------------+-----------+-------+-------+
1 row in set (0.005 sec)

MariaDB [smp_n_1_talang]>
```

4. Membandingkan satu kolom dengan hasil subquery

```
MariaDB [smp_n_1_talang]> SELECT nm_siswa, ttl
    -> FROM siswa
    -> WHERE ttl > (SELECT ttl FROM siswa WHERE nm_siswa = 'dimas');
+----------+----------------+
| nm_siswa | ttl            |
+----------+----------------+
| firza    | slawi, 22 juli |
| rehan    | slawi, 23 juli |
+----------+----------------+
2 rows in set (0.008 sec)
```

5. Membuat tabel sementara untuk filter

```
MariaDB [smp_n_1_talang]> SELECT sub.nis, sub.nm_siswa
    -> FROM (
    ->     SELECT nis, nm_siswa, agama
    ->     FROM siswa
    ->     WHERE agama = 'islam'
    -> ) AS sub;
+-----+----------+
| nis | nm_siswa |
+-----+----------+
| 250 | firza    |
| 251 | dimas    |
| 252 | rehan    |
+-----+----------+
3 rows in set (0.022 sec)
```

6. Scalar subquery di SELECT

```
MariaDB [smp_n_1_talang]> SELECT nm_siswa,
    ->        (SELECT AVG(nis) FROM siswa) AS rata_nis
    -> FROM siswa;
+----------+----------+
| nm_siswa | rata_nis |
+----------+----------+
| firza    | 251.0000 |
| dimas    | 251.0000 |
| rehan    | 251.0000 |
+----------+----------+
3 rows in set (0.018 sec)
```

7. Cari siswa yang lahir paling muda di tiap alamat

```
MariaDB [smp_n_1_talang]> SELECT s1.nm_siswa, s1.alamat, s1.ttl
    -> FROM siswa s1
    -> WHERE s1.ttl = (
    ->     SELECT MIN(s2.ttl)
    ->     FROM siswa s2
    ->     WHERE s2.alamat = s1.alamat
    -> );
+----------+------------------+----------------+
| nm_siswa | alamat           | ttl            |
+----------+------------------+----------------+
| firza    | jl.merdeka no 1  | slawi, 22 juli |
| dimas    | jl.merdeka no 2  | slawi, 21 juli |
| rehan    | jl.merdeka no 12 | slawi, 23 juli |
+----------+------------------+----------------+
3 rows in set (0.017 sec)
```
